

FIREWALL MONITORING

A TCG Managed Service

How protected are your systems from Internet attacks?

Your systems hold critical, confidential and valuable information. Protecting this corporate asset must be a top priority – a priority that doesn't end just because a security architecture has been implemented. You must continuously monitor and respond to daily security threats that crop up with little or no warning. You cannot let your guard down for one moment.

The Computer Guys (TCG) will monitor your firewall 24 hours a day, 7 days a week to protect your corporate networks from loss of connectivity, security attacks and breaches. Hackers don't need a reason to enter your network and damage your data – they just need an opening. When you work with TCG, our Support Center observes your firewall continuously and detects suspicious activity.

Our Firewall Solution protects your network, equipment and applications from the ever present, always growing threat on the Internet. We understand that every company is unique. This is why our Firewall Solution begins by establishing a security policy and developing a specific policy of corrective action that makes sense for your business. Then we constantly review alerts and activity logs and respond appropriately based on your security policy.

Without Firewall Monitoring you are susceptible to attacks such as:

- SYN Floods
- Ping of Death
- IP Spoofing
- Denial of Service

Some of the real-time and historical data and management reporting options available include:

- Network Activity
- Bandwidth Usage
- Inappropriate Web Use

The end result? Better protection for your business.

Peace Of Mind Is Easy With The Computer Guys

You need to be certain that your IT investment returns maximum productivity. TCG's Firewall Monitoring, just one of our Managed Services, protects the performance, stability and security of your systems – providing peace of mind 24 hours a day, 7 days a week.

We help you keep your applications available, maintained and performing strong while freeing up internal resources to focus on other critical, core business issues.

Our in-house professionals are knowledgeable and experienced and stay up-to-date on the latest technology and security threats. Our years of experience provide us with the ability to quickly learn and understand your business, so we can offer customized IT solutions and the right support for your unique situation.
